

HA03: Accelerating Habitat Conservation in Southwest Minnesota

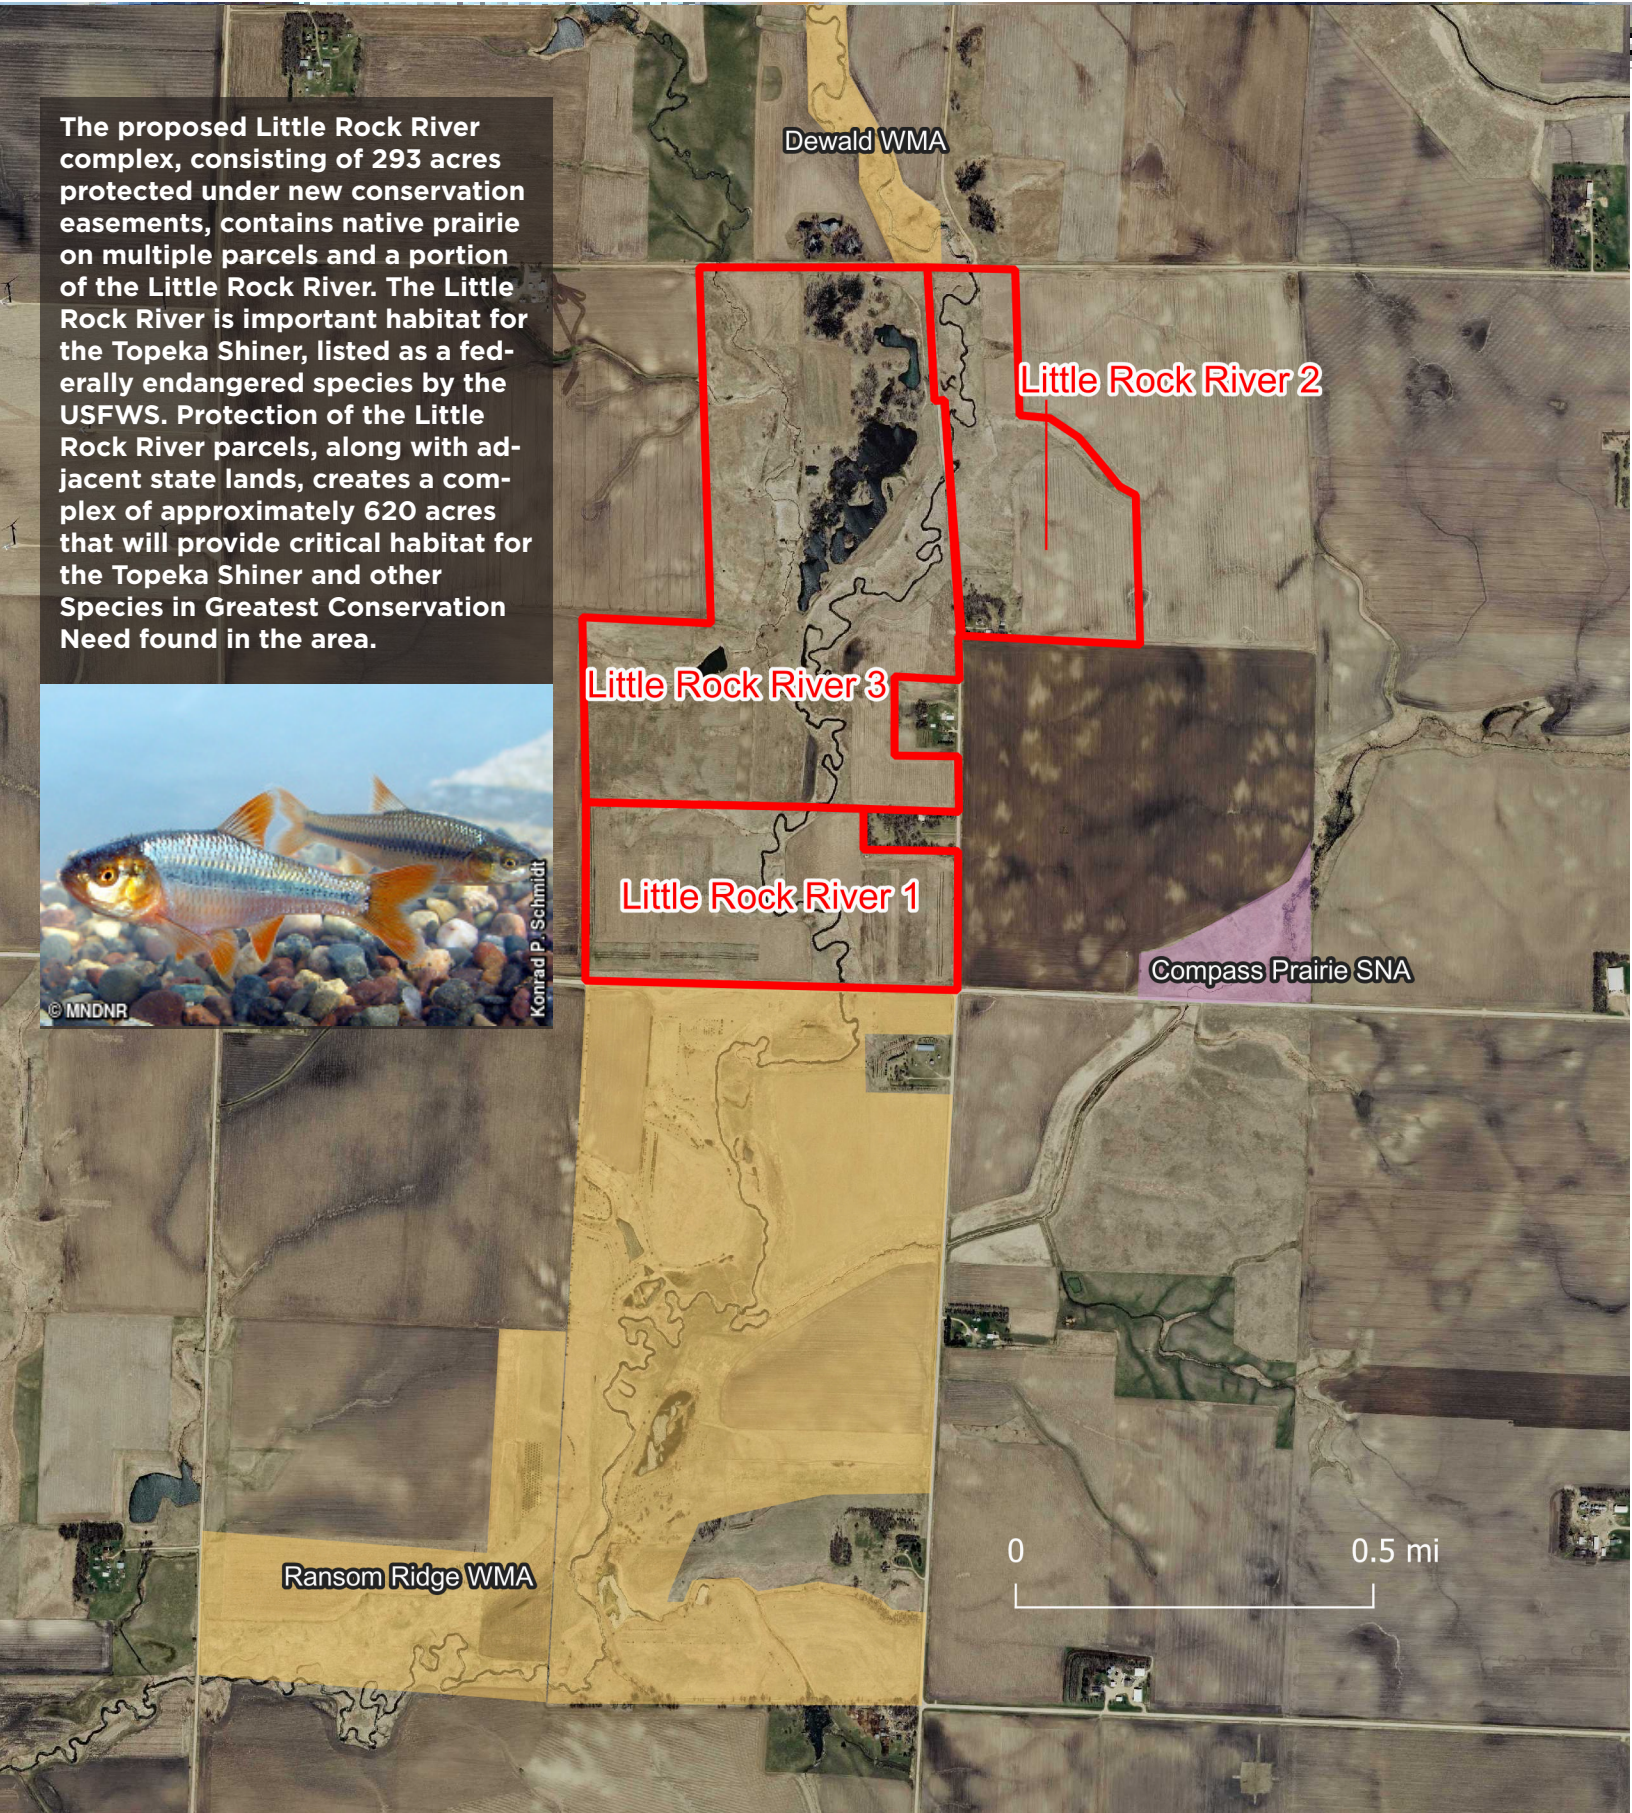

Phase 2

The proposed Little Rock River complex, consisting of 293 acres protected under new conservation easements, contains native prairie on multiple parcels and a portion of the Little Rock River. The Little Rock River is important habitat for the Topeka Shiner, listed as a federally endangered species by the USFWS. Protection of the Little Rock River parcels, along with adjacent state lands, creates a complex of approximately 620 acres that will provide critical habitat for the Topeka Shiner and other Species in Greatest Conservation Need found in the area.
